

INTRODUCING

# STATIC POWER

Static Power Pty. Ltd. is a privately owned company providing support products and services to the critical power industry. The company was started in 2002 with a team of dedicated, experienced engineers and professionals. Our growth and market segment acceptance is due to its superior range of products.

Using the trading name "*i-STS manufacturing*", a unique range of Static Transfer Switches has been developed and manufactured to service the critical power industry, allowing end clients to attain greater power availability.

We use modern engineering and manufacturing techniques and technology to produce a series of state-of-the-art Static Transfer Switches (STSs) ranging from the 10 Ampere Rack Mounted type to free standing units in excess of 2500 Amperes. All of our units offer a full range of features such as intelligence, small physical size, robustness and reliability.

Static Power does not compromise on quality or performance and provides technically superior products at a competitive price. Our range of products is also backed up with the industry's longest product warranty and support scheme, further reducing the risk to your clients investment.

As you peruse through this catalogue you will be introduced to some of the product variations that comprise our area of expertise. There are many physical variants possible and we have chosen to show just a few. If you have specific requirements or specifications, these can be readily adapted as all of our STSs are modular and based on the same basic technology implementations.

Due to our engineers' long relationship with the UPS and critical power industry, we understand your customers and the importance of the products that comprise their critical power infrastructure. We have the equipment, experience and know how.

We are focused on both local and international markets with specific focus on the SE Asia and China markets. For this market we are strategically placed to provide professional advice and support with just 2 hours time zone variation and less than 8 hours travel time, local and spares holdings.
